

# Part 3: MCP & RAG

[download latest version](#)

Review From last Time

# Part 1: Prompting the LLM

We looked at how to prompt and why it is important.

## Part 2: LLM Tokenization

We looked at how the LLM chunks our sentences.

# Model Context Protocol

# Model Context Protocol

- ▶ The MCP creates a standardized, two-way connection for AI applications, allowing LLMs to easily connect with various data sources and tools.
- ▶ MCP builds on existing concepts like tool use and function calling but standardizes them. This reduces the need for custom connections for each new AI model and external system.
- ▶ MCP enables LLMs to use current, real-world data, perform actions, and access specialized features not included in their original training.

# Retrieval-Augmented Generation

Retrieval-Augmented Generation (RAG) is an approach that improves how language models respond by connecting them to external data sources.

## My Lab Example

I kept “starting over” by accident because my models did not have a set of static reference materials.

I started creating a PDF document to give my models a “brain” and allow for a common starting point.

# Training Resources

Relevant training materials.
